Email to your manager

Subject: 15 minutes to approve a free SheetSpeed pilot — go/no-go on [date]

Hi [Name],

I'd like 15 minutes to approve a free, time-boxed pilot of SheetSpeed: Excel-style shortcuts in Google Sheets, Docs and Slides, for [N] people on [team].

Today we lose time re-learning menus after moving work into Google. SheetSpeed keeps the keyboard habits we already have. Spreadsheet content is not sent to a SheetSpeed server.

This pilot costs $0. After their early access, list price is $69/user/year (or $7.99/month). I will fill a one-page business case with our numbers. Hours saved, if we show any, will be labelled as a soft estimate, not a budget cut.

The one-page decision summary is here: https://sheetspeed.agi-jarvis.com/trust/ (For your manager).

Please reply with a time, or with the name of the approver I should include, by [date].

Thanks,
[Your name]

Email to security / IT

Subject: SheetSpeed (Chrome extension) — trust pack for review

Hi [Name],

We would like IT to review SheetSpeed, a Chrome Web Store extension (ID `ljlmgielacploapelnjhodicgbjipcaa`), before a small team pilot.

Everything you need is on one page, including the permission list, what leaves the browser, uninstall and deletion, change of control, the Workspace admin steps, and the legal documents:

https://sheetspeed.agi-jarvis.com/trust/ (For IT and security)

Please note, plainly: the vendor does not have a SOC 2 report. Compensating controls are listed on that page. They recommend piloting on a small OU first.

Questions: jarvis@agi-jarvis.com.

Thanks,
[Your name]

Email to teammates (pilot group)

Subject: Starting a short SheetSpeed pilot on [date]

Hi [team],

On [date] we are starting a [30]-day pilot of SheetSpeed, a Chrome extension that adds familiar Excel, Word and PowerPoint shortcuts to Google Sheets, Docs and Slides.

What changes on day one: after your admin allows it, or after you install it from the Chrome Web Store, the shortcuts work in your existing Google files. There is no new file format and no new login for Core shortcuts. Optional Pro tools will ask for Google permission if you use them.

This is a trial, not a mandate to change how you work. If something is in the way, tell [champion] by [midpoint date]. We will decide whether to keep it on [go/no-go date] against written criteria, not vibes.

A two-minute walkthrough is here: https://sheetspeed.agi-jarvis.com/trust/ (For teammates).

Thanks,
[Your name]

Short ticket / request form (if your company uses one)

What: Allow (or force-install on a pilot OU only) the Chrome Web Store extension SheetSpeed, ID `ljlmgielacploapelnjhodicgbjipcaa`.

Why: Time-boxed team pilot of Excel-style shortcuts in Google Sheets, Docs and Slides. Pilot cost is $0.

Security pack: https://sheetspeed.agi-jarvis.com/trust/

Ask: Review permissions, confirm a small OU first, and do not force-install org-wide until the go/no-go.

Rollback: Set the app to Block, or remove Force install. Users revoke Google access at myaccount.google.com/permissions.

Contact: [champion], plus jarvis@agi-jarvis.com.
